# 15 Hours Reclaimed. One System Built to Scale.

## Cut manual errors and wasted hours with automation.

Manual invoice management doesn't scale. Before automation, our internal process required over 15 hours each month just to collect, log and track vendor invoices. It was slow, inconsistent and full of opportunities for human error.

### Before Automation:

**High Touch. High Friction. High Risk.**

Invoiced via email. Often missing details or delayed.

Files manually saved to cloud storage.

Data manually entered in multiple places.

Manual follow up and no real time visibility.

### Results:

A fragile, error-prone process plagued by missed steps, wasted time, low visibility and confusion—all reliant on human memory and manual effort.

### After Automation:

**Efficient. Timely. Consistent.**

Payment requested via secure portal.

Automatic notifications to stakeholders and vendors.

Approved invoices logged and queued for payment automatically.

Automatically synced data into financial tracking tools.

### Results:

A streamlined, reliable process with fewer errors, improved visibility and confident coordination among partners and stakeholders—powered by automation.

## Manual Isn't Scalable

If your workflows still rely on manual steps, you're losing time and risking errors. Frozen Fire builds automation that fixes both so you can spend time where it matters most: focusing on your customers.
